Phase 2 Expectations:

Statistics

// FLATIRON SCHOOL

Agenda

1. Phase 2 Overview
2. Week 1: SQL & Probability
3. Week 2: Hypothesis Testing & Simple Linear Regression
4. Gating & Assessments
5. Questions/Feedback

Phase 2: Overview

// FLATIRON SCHOOL

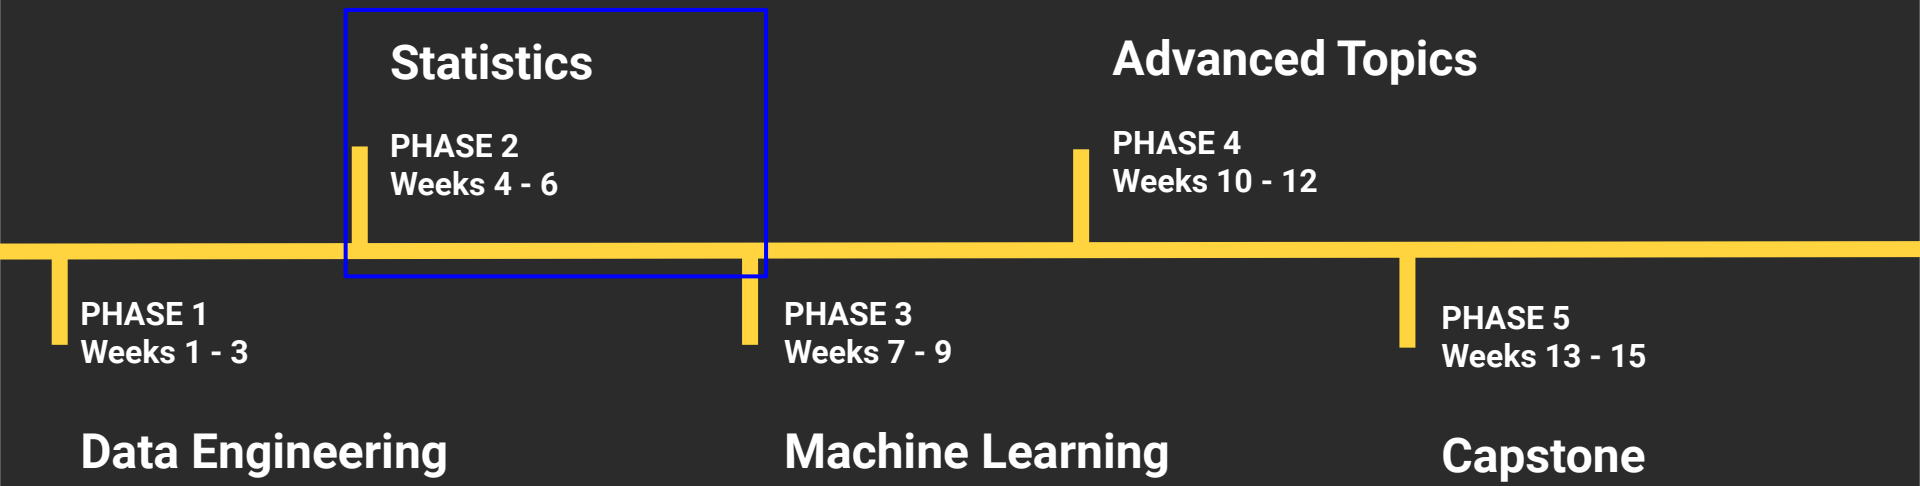
9:55 AM - 3 May 12

Overall Phase Timeline



Statistics for Data Science

- Common data storage method
- Relational databases
- New way to access information
- Critical skill
- Integrate with python - pandas

- Uncertainty, confidence
- Predictive probability
- Conditional probability
- Distributions

- Hypothesis testings: Z-test, t-test, ANOVA, Chi-Squared
- Using distributions
- Beginning of data modeling
- Simple Linear regressions
- Quantifying relationships

Probability

Probability of Simple Events

$$P(A) = \frac{n}{N} = \frac{\#\,outcomes\ in\ A}{\#\,outcomes\ in\ Sample\ Space}$$

Probability

Multiplication Rule

Independent Events

$$P(X \cap Y) = P(X) \cdot P(Y)$$

Dependent Events

$$P(X \cap Y) = P(Y) \cdot P(X \mid Y)$$

Bayes' Theorem

$$P(X \mid Y) = \frac{P(X \cap Y)}{P(Y)}$$

Probability of Compound Events

Independent Events

$$P(A \text{ and } B) = P(A) \times P(B)$$

Dependent Events

$$P(A \text{ and } B) = P(A) \times P(B \mid A)$$

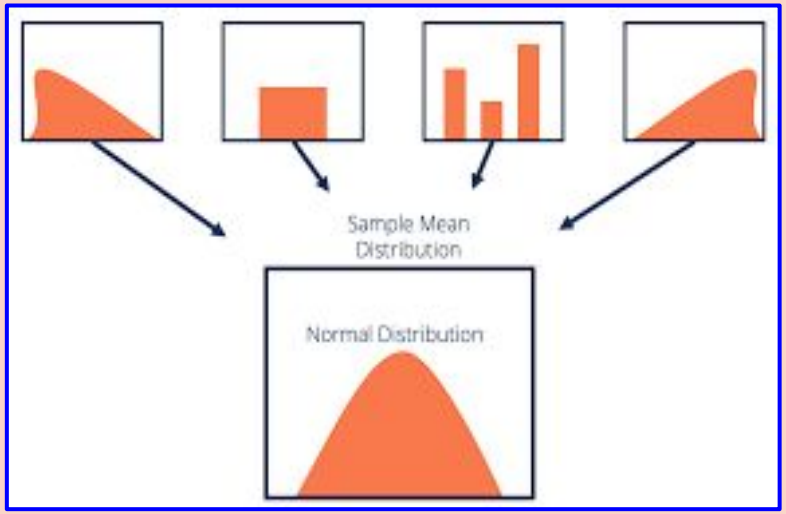
Mutually Exclusive

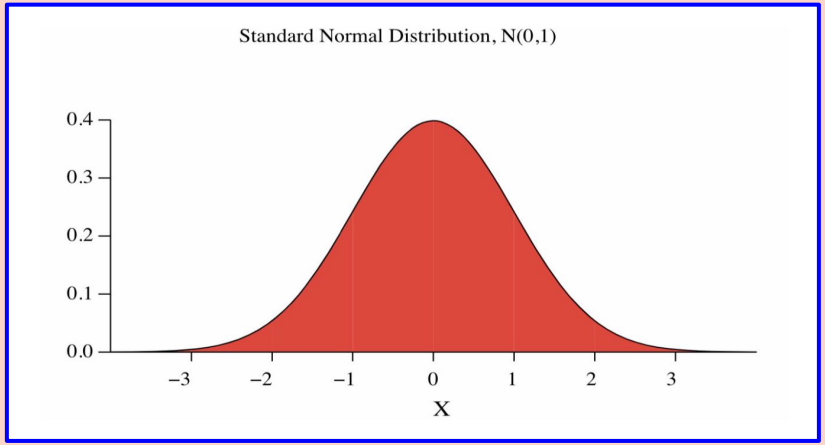
$$P(A \text{ or } B) = P(A) + P(B)$$

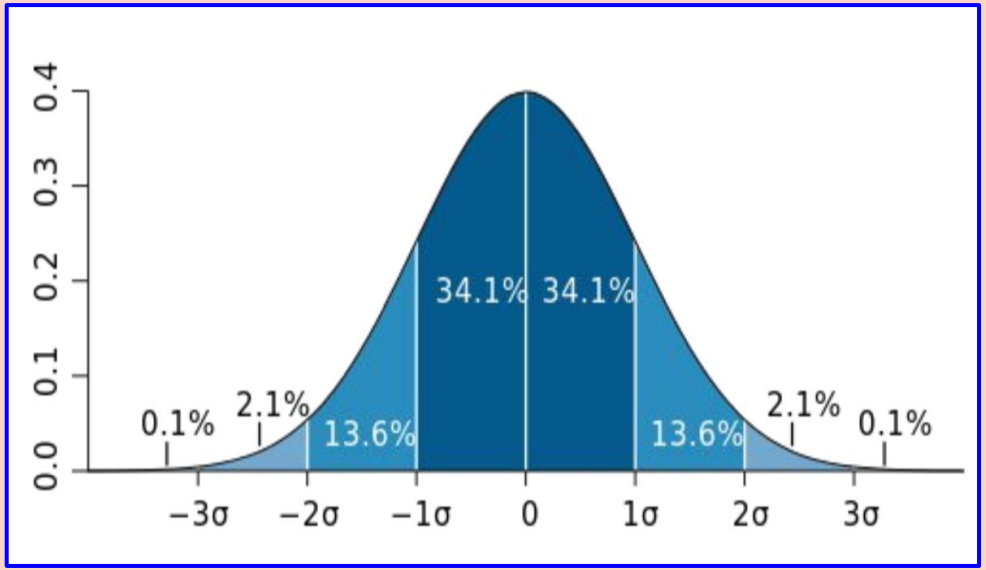
Mutually Inclusive

$$P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$$

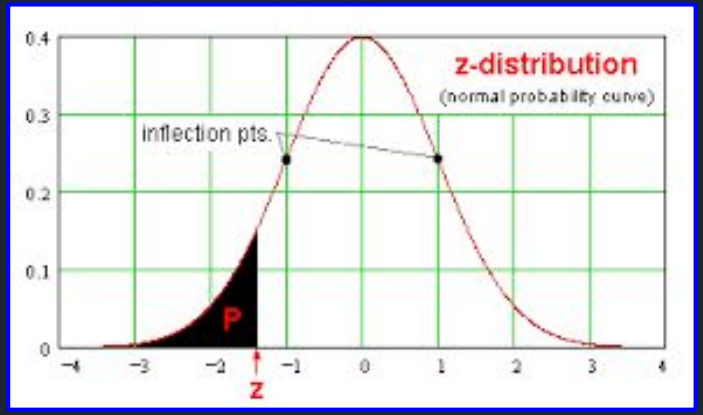
Distributions

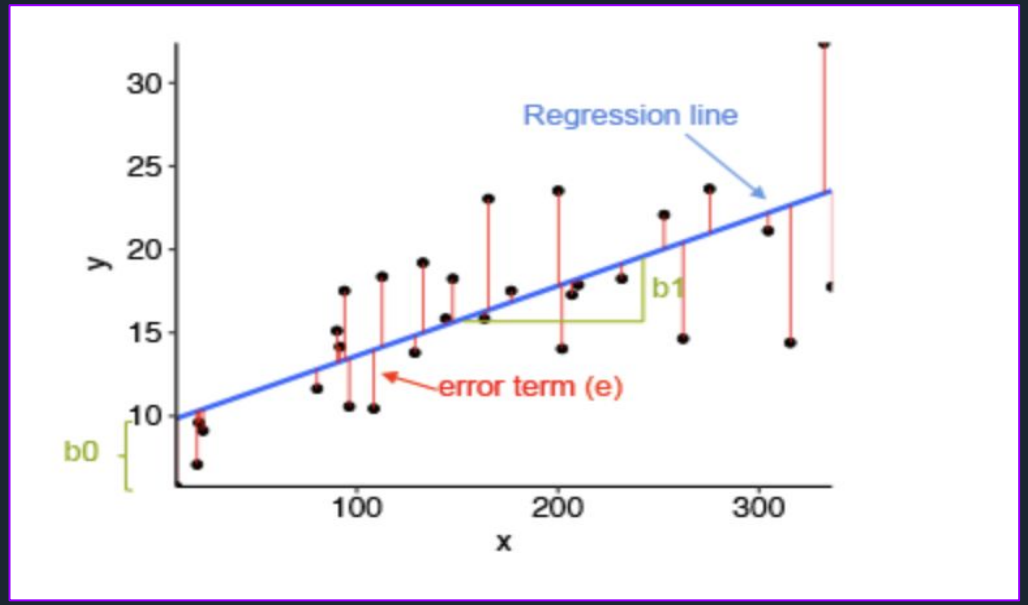






Hypothesis Testing





Measuring Student Progress

Required Quizzes

- SQL Table Relations
- Statistical Distributions
- Introduction to Linear Regression

CP & CC

- 10/09 - Wed - SQL Checkpoint
- 10/16 - Wed - Hypothesis Testing Checkpoint
- 10/17 - Thursday - Phase 2 Code Challenge

Project

- Movie Data
- SQL Database
- Hypothesis Testing
- Level-up: Simple Linear Regression

NOTE: Holiday - 10/14
